

The Ultimate Wiping Tool To Securely Erase Any File

> BCWipe™ by Jetico uses military-grade procedures to remove all traces of your deleted files.

Enterprises with the most stringent requirements on earth rely on BCWipe to protect their highly sensitive information or mission-critical data. When you are required to remove data and ensure the information cannot be recovered by unauthorized personnel, BCWipe is how you do it.

Don't Just Delete Data - BCWipe It!

BCWipe by Jetico is designed to securely erase files from any disk or memory media. Standard file deletion only removes the reference to that file while the contents remain intact on your hard drive. The file you intended to erase could easily be restored with a widely available and inexpensive undelete tool. BCWipe effectively shreds data beyond recovery.

Surgically Clear Any File In Seconds

Classified data spills and malware attacks can happen to the best of us. If your hard drive contains spilled or infected data, your first priority must be to sanitize every last bit of the contamination. Select the files, right-click and delete with wiping. Instead of just shredding your entire disk, BCWipe surgically removes the selected data while the rest of your valuable files remain safely intact - giving you peace of mind.

Key Benefits

- Prevent costly data leakage
- Remove contaminated files with surgical precision
- Comply with security mandates
- Sanitize file systems
- Maintain computer stability
- Gain peace of mind

"BCWipe works very well in our lab and does exactly what it's supposed to do. Beyond using it myself, I have recommended BCWipe to our customers for clearing a disk of contaminated files or responding to a data spillage event."

- Frank T., Principal Engineer, Data Domain

Transparent Wiping - NEW!

Jetico is introducing a higher level of protecting deleted information from unauthorized recovery - BCWipe's Transparent Wiping. When activated, Transparent Wiping will automatically wipe all contents of any file or folder that is deleted. So, you no longer need to worry about securely erasing all traces of every single sensitive file you've been working on - BCWipe's Transparent Wiping will always be there to take care of it!

Transparent Wiping securely erases the following sensitive information on the fly:

- All files and folders deleted using normal commands
- Temporary files created when working with data secured with encryption
- Data stored in Recycle Bin when Empty Recycle Bin is selected
- Temporary files created by Windows and applications
- Data stored in Windows Restore Point when the Restore Point is deleted
- Or only specific types of files, folders and applications by configuring include/exclude lists

"With BCWipe's Transparent Wiping running in the background, I will always be working in a totally clean environment."

- Bruce Schneier, Security Expert

Flexible Wiping Options

BCWipe is a powerful, industrial strength wiping utility which complies with U.S. Department of Defense (DoD 5220.22-M) standard, U.S. Department of Energy (DoE M 205.1-2) standard and a set of other standard wiping schemes to shred information in deleted files, free disk space, swap file, empty directory entries and file slacks.

In addition to creating your own wiping scheme, you can configure the wiping process with the built-in Wiping Scheme Editor. View and edit the number of wiping passes and binary patterns used in each pass.

BCWipe Task Manager equips you with the utmost flexibility in determining what, when and how to wipe data, including automatic scheduling. For example, you could configure BCWipe to wipe free space of all your hard drives at midnight every Friday using the U.S. DoD 5220.22-M wiping standard.

Enforcer™ - For Systems Management

BCWipe Enterprise™ features *Enforcer*, which allows IT administrators to remotely wipe selected data on any drive in their network, without end-user intervention.

To meet growing demands, BCWipe Enterprise is available with the following features and benefits:

- > Significantly reduced total cost of ownership, thanks to faster deployment times, minimized maintenance and superior data leak prevention
- > Enforce policies with no end-user intervention
- > Run as a system service on Windows
- > Central administration to remotely install, configure and manage BCWipe on all stations in your network
- > Compatible with systems management software (e.g., Microsoft SMS, LANDesk)

For more information, please contact Jetico Enterprise Sales at enterprise_sales@jetico.com.

BCWipe Features

- Delete with wiping
- Wipe free disk space
- Wipe swap file
- Wipe empty directory entries
- Wipe file slacks
- Swap file encryption
- Hexadecimal file viewer
- BCWipe Task Manager
- Transparent Wiping

System Requirements

BCWipe is compatible with Windows 7 / Vista / XP / 2008 Server / 2003 Server / 2000 operating systems and supports the following UNIX systems: AIX 5.x-6.1, FreeBSD 4.0-7.1, HP-UX 11, Linux 2.0-2.6, MacOS 10.5, OpenBSD 4.4, Solaris 9-10

Also available: BCWipe Total WipeOut™

- Destroy all contents of whole hard drives, including boot records and operating system files
- Wipe several hard drives in parallel
- Create bootable CD (or USB flash) for multiple uses
- Runs on any operating system

Technical Support

The Jetico development team is committed to satisfying our loyal customers by continuously perfecting our software. We invite you to suggest any improvements or additions you would like to see in future versions.

About Jetico

Jetico provides military-standard data protection software for sensitive information and mission-critical data throughout the lifecycle. Approved for use by the U.S. Department of Defense, Jetico's BCWipe surgically clears selected data such as in response to classified data spills, while BCWipe Total WipeOut erases entire hard drives for disposal or decommission. Jetico's BestCrypt disguises the data you keep with strong encryption that's easy to use.

Jetico products are used in over 100 countries by government and military agencies, national laboratories, industrial manufacturers, as well as various other enterprises and a wide global base of home and small business users. Founded in 1995, Jetico is privately held and headquartered in the Otaniemi Science Park in Espoo, Finland.
