

BCWipe Total WipeOut™

BCWipe Enables Trusted Computer Donations with Tamper-Proof Wiping

THE CHALLENGE

For Fablab des 3 Lapins, companies that donate their used computers demand reliable proof of data erasure. Used computers are donated by various sources to combat the digital divide, equipping disadvantaged communities and helping jobseekers.

“We need to gain trust from companies who give us their computers. Before a used computer can come back for a second life, BCWipe makes sure that no sensitive data remains,” clarifies Implementation Expert of Fablab des 3 Lapins, Norbert Romand.

Originally, Fablab was using the Linux native method for their data wiping and reporting. Fablab’s complaint was that it was too time-consuming, and it had proved difficult to get help from a non-Linux specialist.

Aware of these demands and with limited resources, Romand knew he needed to find an alternative — and fast:

- Wipe hard drives before donating
- Retrieve tamper-proof wiping reports
- Provide user-friendly solution for all collaborators

THE SEARCH

Fablab evaluated Jetico’s BCWipe Total WipeOut among native and third-party alternatives. Fablab required a trustworthy solution that was easy to use. Impressed by Jetico’s reputation — trusted for over 20 years by clients like the U.S. Department of Defense — Fablab selected Jetico’s BCWipe Total WipeOut.

THE SOLUTION

Fablab des 3 Lapins invested in Jetico’s solution to assure the contributors of used computers that their data was securely erased along with a reliable wiping report.

“Getting started with BCWipe was easy as pie — the friendly interface held our hand throughout the creation of the bootable disk,” explains Romand. “Once ready, we just had to plug in the disk in the desired computer, and bam, the wiping process started.”

Profile: Fablab des 3 Lapins (‘Fablab of the 3 rabbits’) is a non-profit organization whose mission is to implement the digital revolution in rural and socio-disadvantaged areas. The goal is to combat the widening digital divide and advance virtuous, sustainable, and equitable economic and social development.

Industry: Non-profit

Employees: 15

Website: www.fablab3lapins.org

Need for Wiping: Trustworthy and user-friendly wiping solution able to provide tamper-proof reports.

“ We need trust from the companies that give us their computers. Before giving a computer back for a second life, BCWipe makes sure no sensitive data remains.

Norbert Romand, Implementation Expert, Fablab des 3 Lapins

“ Getting started with BCWipe Total WipeOut was easy as pie — just plug in the disk in the desired computer, and bam, the wiping process starts.

With an enterprise license of BCWipe Total WipeOut, Fablab was equipped with a bootable disk that allowed them to wipe unlimited PCs.

Beyond security and simplicity of use, Fablab enjoyed the wide choice of schemes for wiping. “Giving the option to select a wiping scheme is always a plus for our donors. It’s an extra reassurance that their data is being handled by professionals. Also, it helps them match potential industry requirements,” explains Romand.

“Fablab couldn’t be happier with the results, as well as the customer service received from Jetico,” says Romand. “This has been the best experience Fablab has had with a software company.”

Why BCWipe Total WipeOut?

- Tamper-proof wiping reports
- User-friendly solution — no need to learn new skills
- Reliable provider — trusted 20+ by U.S. DoD
- Wide choice of wiping schemes — meet different industry standards
- Responsive Commercial & Technical Support
